1. Cloud area: this space includes all cloud boxes	11. Shell button: click here to open a terminal on the VM over an SSH connection
2. Service area: this space inclides all Virtual Machines (VMs)	12. Power off button: click here to power off the VM
3. Cloud box: each box refers to a cloud federated in MyCloud	13. Waste basket: to delete a VM click on it and drag it over the waste basket; if you want to delete more machines at once select them using their tick boxes
4. Logo of the middleware installed on a given cloud	14. Multi-deployment button: if you want to deploy one machine on more clouds simultaneously, click on one of the VMs listed in service area and drag it over this button; then enter the number of copies of the VM you want to deploy
5. Cloud reload button: click here to reload the status of the given cloud federated in MyCloud	15. Help button: click here to display this help
6. Logo of the organisation providing the cloud federated in MyCloud	16. Global reload button: click here to reload the status of all clouds federated in MyCloud
7. Flag of the country where that given cloud is located	17. Click on the various options to select or unselect VMs to be moved or deleted
8. Virtual Machines available	
9. List of Virtual Machines deployed in a given cloud; to deploy a VM click on one of the VMs listed in service area and drag it in the cloud box where it has to be deployed; then choose the profile and the number of copies. If you want to move one or more VMs across clouds, select them and drag and drop them in the destination cloud box	
10. Info button: Click here to get information on a given VM
